We spoke to Joseph Lombardi from Shawmut Design and Construction about his use of the Procore to SharePoint integration and how it has helped their company.

Q: What were your processes before using the Procore to SharePoint integration?
A: We used Procore Sync. This was included with our Procore Subscription.

Q: What made you want to change?
A: We learned in early '22 that Procore Sync was being discontinued by Procore so we started to research companies that could replace it. SkySync, odrive and SyncEzy were the companies that jumped out at us.

Q: How did you find SyncEzy?
A: Procore sent out an announcement that it was ending support for the Procore Sync Application and within that announcement, there was a link to integrations that Procore recommended. SyncEzy was one of those integrations.

Q: What have been the big wins whilst you have been using the integration?
A: Our big wins were:
- It was easy to set up
- It syncs Documents and Photos
- There were no security issues with our stringent IT Department
- Syncs almost instantly (some of their competitors sync only a few times an hour)
- I like that the files are also available in Teams as well as Procore as we use both platforms regularly
