**We spoke to Belinda Muniz from Joeris General Contractors, LLC about their use of the Procore to SharePoint integration and how it has helped their company.**

**Q: What were your processes before using this integration?**
A: Before SyncEzy, moving project documents from Procore into SharePoint was a manual process. Our teams downloaded and re-uploaded files by hand, which was time-consuming.

**Q: What made you want to change from your previous processes to the integration with SyncEzy?**
A: We already used Microsoft 365 and SharePoint across the business, so we wanted our Procore documents to get there automatically instead of by hand. SyncEzy did exactly what we needed: file syncing between Procore and SharePoint, without our IT team having to build and support something ourselves.

**Q: What were the big wins while you have been using the integration?**
A: Operating across four offices, consistency had always been a challenge. SyncEzy gave us a standardized structure, so every project's documents now reside in the same location in Procore then sync to SharePoint regardless of which team is managing the work.

**Q: Lastly, if you were describing the integration and its value when chatting to a friend, how would you describe it?**
A: I would recommend it without hesitation, with one piece of advice: invest in planning before implementation. Establish your SharePoint folder structure up front and provide in-person training so your teams understand exactly where information lives.

> **SYNCEZY GAVE US A STANDARDIZED STRUCTURE, SO EVERY PROJECT'S DOCUMENTS NOW RESIDE IN THE SAME LOCATION IN PROCORE.**
