

We asked Blake Paul from Fletcher Building about their use of the Procore to SharePoint integration and how it has helped their company.

Q: What were your processes before using the Procore to SharePoint integration?

A: There were no existing processes before the integration, Procore and SharePoint were Standalone. We only recently moved to SharePoint and Procore, all files were originally stored on Box for our projects and managed through Aconex.

Q: What made you want to change?

A: The costs for Box were too high and we were already paying for office 365 so the move made sense. SyncEzy enables our files to be backed up so that they're not stored on a single location (Procore). We've had issues with Aconex where they charge a large amount to access our older archived projects, which is not practical.

Q: How did you find SyncEzy?

A: Through research and search engines

Q: What have been the big wins whilst you have been using the integration?

- The data is stored in multiple locations
- Much more affordable solution
- We have our own server
- The support is much better than what Oracle provides

Q: Lastly, if you were describing the integration and its value when chatting with a friend, how would you describe it?

A: It has potential to grow. The support is great, and it helps us ensure data is kept which is important for legal reasons. I'm looking forward to see what improvements are planned and how they will benefit us further.

IT HAS POTENTIAL TO GROW. THE SUPPORT IS GREAT, AND IT HELPS US ENSURE DATA IS KEPT WHICH IS IMPORTANT FOR LEGAL REASONS.
