

simPRO to TSheets integration

We spoke to Fiona Atkin from Innovative Controls about her use of the simPRO to TSheets integration and how it has helped her company.

What were your processes before using the simPRO to TSheets integration?

The process before implementing simPRO to TSheets was extremely cumbersome and time consuming. As most of our technicians did not have access to simPRO to record times, they had to send me an email or text message with their hours at the end of the fortnight. Most of the time I had to chase them up on the weekend before payroll.

Once I received their email/text message I had to enter their times into simPRO. Prior to implementing simPRO to TSheets we had 22 staff of which only 5 had access to simPRO to enter their times.

Once all the times were entered into simPRO I had to enter their times into a spreadsheet which would then calculate their hours and entitlement to overtime.

Once the times were entered into the spreadsheet I had to manually enter their times into Xero.

Naturally given the amount of times I had to enter information into different software programs I had to double, triple check etc the data to make sure I did not make an error.

What made you want to change?

Payroll would take me most of the weekend and part of Monday to process as pay day was on Tuesday morning. I was a pretty fed up with losing my weekend every other fortnight in order to process payroll so looked into time-keeping software that would integrate with simPRO.
