We spoke to Crystal Webster from CEM Engineering about their use of the Autodesk to SharePoint integration and how it has helped their company.

Q. What were your processes before using this integration?
A: We are new to using ACC and were only usingAutodesk Desktop applications and SharePoint separately before.

Q: What made you want to change from your previous processes to the integration with SyncEzy?
A: We have begun a partnership with an external company and needed to share drawing files, etc. We had no integration before.

Q: What were the big wins while you have been using the integration?
A: mirroring our files between companies so we don't each have to keep our own copies of files. Less chance of working on the wrong file.

Q: Lastly, how would you describe the integration and its value when chatting to a friend?
A: We have optimized our collaboration with other companies without sacrificing our information management needs. It allows all parties to work in their own environments, but it feels like everyone is working from the same space! We also get to leverage both ACC & SharePoint to their best advantages and limit the shortcomings of each by using the right thing for the right purpose.

IT ALLOWS ALL PARTIES TO WORK IN THEIR OWN ENVIRONMENTS BUT IT FEELS LIKE EVERYONE IS WORKING FROM THE SAME SPACE!
